

Times Shadow Volume IV:
Codename Wardog

by

Indiana Simonde

Isbn: 9781076453815

Dedicated to my children and the special group of friends who made me write this final chapter to a story that has been on my mind for a long time.

“further afield through solar satellites, stars, black bodies and extra spatial entities and dimensions;”

Tempus Annals Iuris Book MDCCCXXI

/* The following computer code for the remainder of this document has been edited to protect the timeline and safeguard security for the >>>> in this multiverse. If you are able to understand the code and make it work you might be able to prevent Sol from imploding */

Codename: Wardog.js

`//for the attention of Abigail Lord from Hugh lord`

`the following is an estimate but i believe they are trying to upgrade the O.S in the past, so that he is already upgradeable in the future. I am leaving you a copy of the periodic table (just the elements you need to fight them).//###`

The periodic table

(properties of elements for a pressure of 1 atmosphere)

1. Alkali Metals

Element - Hydrogen

Symbol - H

Atomic Number - 1

Molar Mass g/mol - 1.00797

Density g/cm(cubed) at 20(deg Cel) - 0.08375 x 10(-3)

Melting point (deg Cel) - (-259.19) (liquid)

Boiling point (deg Cel) - (-252.7)

Specific Heat J/g.(deg Cel) at 25(deg Cel)- 14.4

`###does not print to screen`

`//lost access to the past and the foundation of the future.//`

`//lost access to mainframe//`

`//the ship was destroyed and i remember watching it on a video memory//`

`//they have changed my brain chemistry and are experimenting with cybernetics//`

`//my arm was broken, they upgraded it before i escaped. I think they are tracking the signal so jettison the core at the following coordinates * * * * * . * * * * * . I love you Mrs Lord//`

`###`

A hydrogen atom contains 1 electron, 1 proton (atomic core constituents)

Protons are positively charged, Neutrons are neutral in larger atoms.

2. Metalloids

Element - Lithium

Symbol - Li

Atomic Number - 3

Molar Mass g/mol - 6.939

Density g/cm(cubed) at 20(deg Cel) - 0.534

Melting point (deg Cel) -

Boiling point (deg Cel) -

Specific Heat J/g.(deg Cel) at 25(deg Cel)-

Element - Silicon
Symbol - si
Atomic Number - 14
Molar Mass g/mol - 28.086
Density g/cm(cubed) at 20(deg Cel) -
Melting point (deg Cel) -
Boiling point (deg Cel) -
Specific Heat J/g.(deg Cel) at 25(deg Cel)-

###Data corrupted

Element - Germanium
Symbol - Ge
Atomic Number - 32
Molar Mass g/mol -
Density g/cm(cubed) at 20(deg Cel) -
Melting point (deg Cel) -
Boiling point (deg Cel) -
Specific Heat J/g.(deg Cel) at 25(deg Cel)-

###Data corrupted

Element - Arsenic
Symbol - As
Atomic Number - 33
Molar Mass g/mol -
Density g/cm(cubed) at 20(deg Cel) -
Melting point (deg Cel) -
Boiling point (deg Cel) -
Specific Heat J/g.(deg Cel) at 25(deg Cel)-

###Data corrupted

Element - Antimony
Symbol - Sb
Atomic Number - 51
Molar Mass g/mol -
Density g/cm(cubed) at 20(deg Cel) -
Melting point (deg Cel) -
Boiling point (deg Cel) -
Specific Heat J/g.(deg Cel) at 25(deg Cel)-

//The Flood are everywhere, no machines in the past so finding the neural core is im-
perative. I'm injured but not infected.//
//I love you Mr Lord. I don't know how to tell you this but i fear I might die without
seeing you in the Milky Way.//
//Remember that time in Calais on the way to Paris?//
//I miss your laugh, by the way C.A.B.L.E keeps forcing me to eat meds like their going
out of fast.....[connection lost/error]
```

Entropy = A disorder measure. Low entropy is order of something specific. Picture a cloud of electrons that are frozen in space and unable to move at all. This is order. High entropy is a cloud of electrons moving rapidly and at random and highly accurate vectors in a geometric fashion of straight lines and high collisions with light particles(photons). Add background radiation, cosmic radiation, solar radiation, lunar reflection of light and all things cosmological and you have a high Entropy Universe. **{C>A>B>L>E} access Electromagnetism dictionary - unify electricity and magnetism. See Dictionary {Define Newtons Laws of Motion, Define Galileo and Cartesian physics, Fusion, Frequency}**

Electricity = `a steady or unsteady flow of one subatomic particle $\${electron} + \backslash n \${electronic flow}` **{C>A>B>L>E} access Electromagnetism dictionary - unify electricity and magnetism. See Dictionary {Electron shells, Energy, Entanglement, Fermion, Fields, Fission, Force}**$

Galaxy = The milky way is a galaxy. A galaxy is a cluster of millions of stars bound by gravitational forces both small and large. There are a large number of clouds in the night sky. This is relative to where the stars are viewed and when they are viewed. They redshift and are able to be measured based on how far they have travelled over a period of time. Or they are blue-shifted indicating they are moving away from our position at speed. A cloud of gas is a cloud of unbound atoms or molecules. Gases have no edges but may be confined in space by some object denser than the gas. Density is how tightly packed an object is. Gravity is a force and it causes mass to be attracted to itself. **{C>A>B>L>E note: Temporal technology requires high energy and a great deal of speed and radiation is released causing}**

Hadron = Particle made of quarks (subclasses = baryons and mesons)

Many worlds theory = Parallel Universes each with their own Mass. Mass is how many atoms or how much energy something contains within its internal and external structure. Atoms are made up of Protons, Neutrons and Electrons. A molecule is two or more atoms. A nucleus is the core of an atom. A nucleus has subatomic forms of gravitational force that keep it together such as the bonds that electric charge emit (negative) and the force that Protons emit (positive). Positive and negative attract one another. That is how magnetism works. **{C>A>B>L>E will : cross reference Phase, Photon, Pressure into 'Quantum Bits' and save as a hidden file.}**

absoluteTime(ConditionRedAlert = true + intruderAlert); Access.module3(condition-  
RedAlert = bi-factor initialisation of neural memory);  
Access.module3(Error loading Space time Metric)  
Define Space time metric - Geometric space combined with time into a mathematical  
function.  
Define Spectrum - electromagnetWave1 = radioWave1 <= X-ray
```

```
console.log(ConditionRedAlert = true + intruderAlert);
```

A spectrum is electromagnetic - diffraction happens when a wave hits a sharp edge. Disso-
nance is multiple collisions within a wave function.

Universe is all of space and all of time with everything that has ever been created to and
beyond the [modern age] and before the [modern age] all the core constituents of space
and time.

a vacuum is empty space. Space is not a vacuum due to planets, stars, galaxies etc.

Error - break
unable to calculate distance to nearest star.
unable to calculate distance to nearest planet.
There are no stars or planets to calculate distance relative to the Geodesic escape mod-
ule.

```
absoluteTime(ConditionRedAlert = true + intruderAlert); Access.module2(condition-  
RedAlert = Flood detected)
```

Covalent bond : Pairs of electrons shared by two atoms

Ionic bond: electrons from one atom removed and connected to another atom - Ionic discharge is noted (positive or negative charge is ionisation of respective attracted ions).

Van der Waals bonds: electrostatic forces that attract molecules in liquids

Metallic bonds: Positive ions are islands in an oceanic sea of electrons. {Positron - the opposite of an electron}

[illegible]

“**Equality** is absolute, Equality, price we share is the cost of a tree. A wide range of conditions affects photosynthetic creation of oxygen of which we each consume daily whilst on the run from the Red Gauntlet; who’s emporor, Imperator, knew no limit. And thus on this barren Rock!” his voice boomed as he continued erasing the final embers of the human dan that had been attached to Hugh Lords cybernetic implant.

“You will know my name as the destroyer of all peoples..” he slowed his voice down slightly and for a second, to her horrified expression she almost heard his voice chillingly deepen.

“Slayer of all things, for I have come..” she waited for him to turn his back around to face her.

“I am but a messenger of times in-satiated, of days morning light crushed. I am your father, your Lord is dead...” she tried not to cry as she drew the C>A>B>L>E unit from the housing and prepared to crush his only working circuit core.

“His wife, the Lord’s wife, has something I want - Guidance system offline, fuel cell depleted, give me what I want or you will be next.” Abigail glanced at C>A>B>L>E in a state of disrepair and with sorrow smashed his quantum matrix for she knew Imperator could never have it, and that is how she became the most powerful and the last human being to survive the Flood. As she sat reading the words from the old book she carried everywhere she knew that she would at last die an old woman for Imperator, the computer that had plagued her waking nightmares and her dreams alike was once and for all dematerialising due to the destruction of the C.A.B.L.E architecture and computer in every timeline. But with him she began to fade whilst reading the words on the book aloud. She smiled and sadly let out a column sigh as the last words a human being would utter in this universe echoed silently on the mountain, by the stream, next to the body of a human robot. As their bodies and the bodies of every human on the planet returned to their respective realities the words echoed in space and time until they ceased to be anything more than a gently moving breeze as with the butterfly effect, which caused the world to be. The words read; “Warmer air holds more moisture, allowing for higher rates of evaporation, whether we like it or not, whether you choose to believe or not, the reality of climate change is upon us. We know Greenhouse gases are trapping heat in the earths atmosphere both now, in the past and in the future. This will produce warmer seasons and water cycles. Worldwide this will devastate aquaculture, biochemistry of plants during the war report, acidification of oceans, ice sheets, island coastlines and acidification across cities and ecosystems.

For a child

Down, down, down

The floor moves a creak,
a tree gnarled and twisted unfurls to produce fruit,
warm and sun lit;
as though kissed by the angels and the stars alike
such a sweet natured child
they were family and as always duty called.
It's acceptable to say that I put them first
Meaning that there was no way to say

Changes

It was how they looked in his eyes
The stroke of her cheek, her smile;
The dancing was all.
Electricity with every touch of her hand as it brushed past
The tilt of her head, her hair.
Never a rose so sweet as the one growing in your heart
I can feel it even now,
Goodbye being the only word I could never say,
Not like the heavenward glance
Exhume smoke and then vapour.
A story cut short motions ever further away from reality
once we had the world at our feet.
We commanded oceans you and I,
in my minds eye
There was never a moon to love or a sun to worship;
just the romantic loss of wilting flowers ever flaking
on oaken tables mahogany or otherwise.
I could still be

A Redemption song

Years in a strand

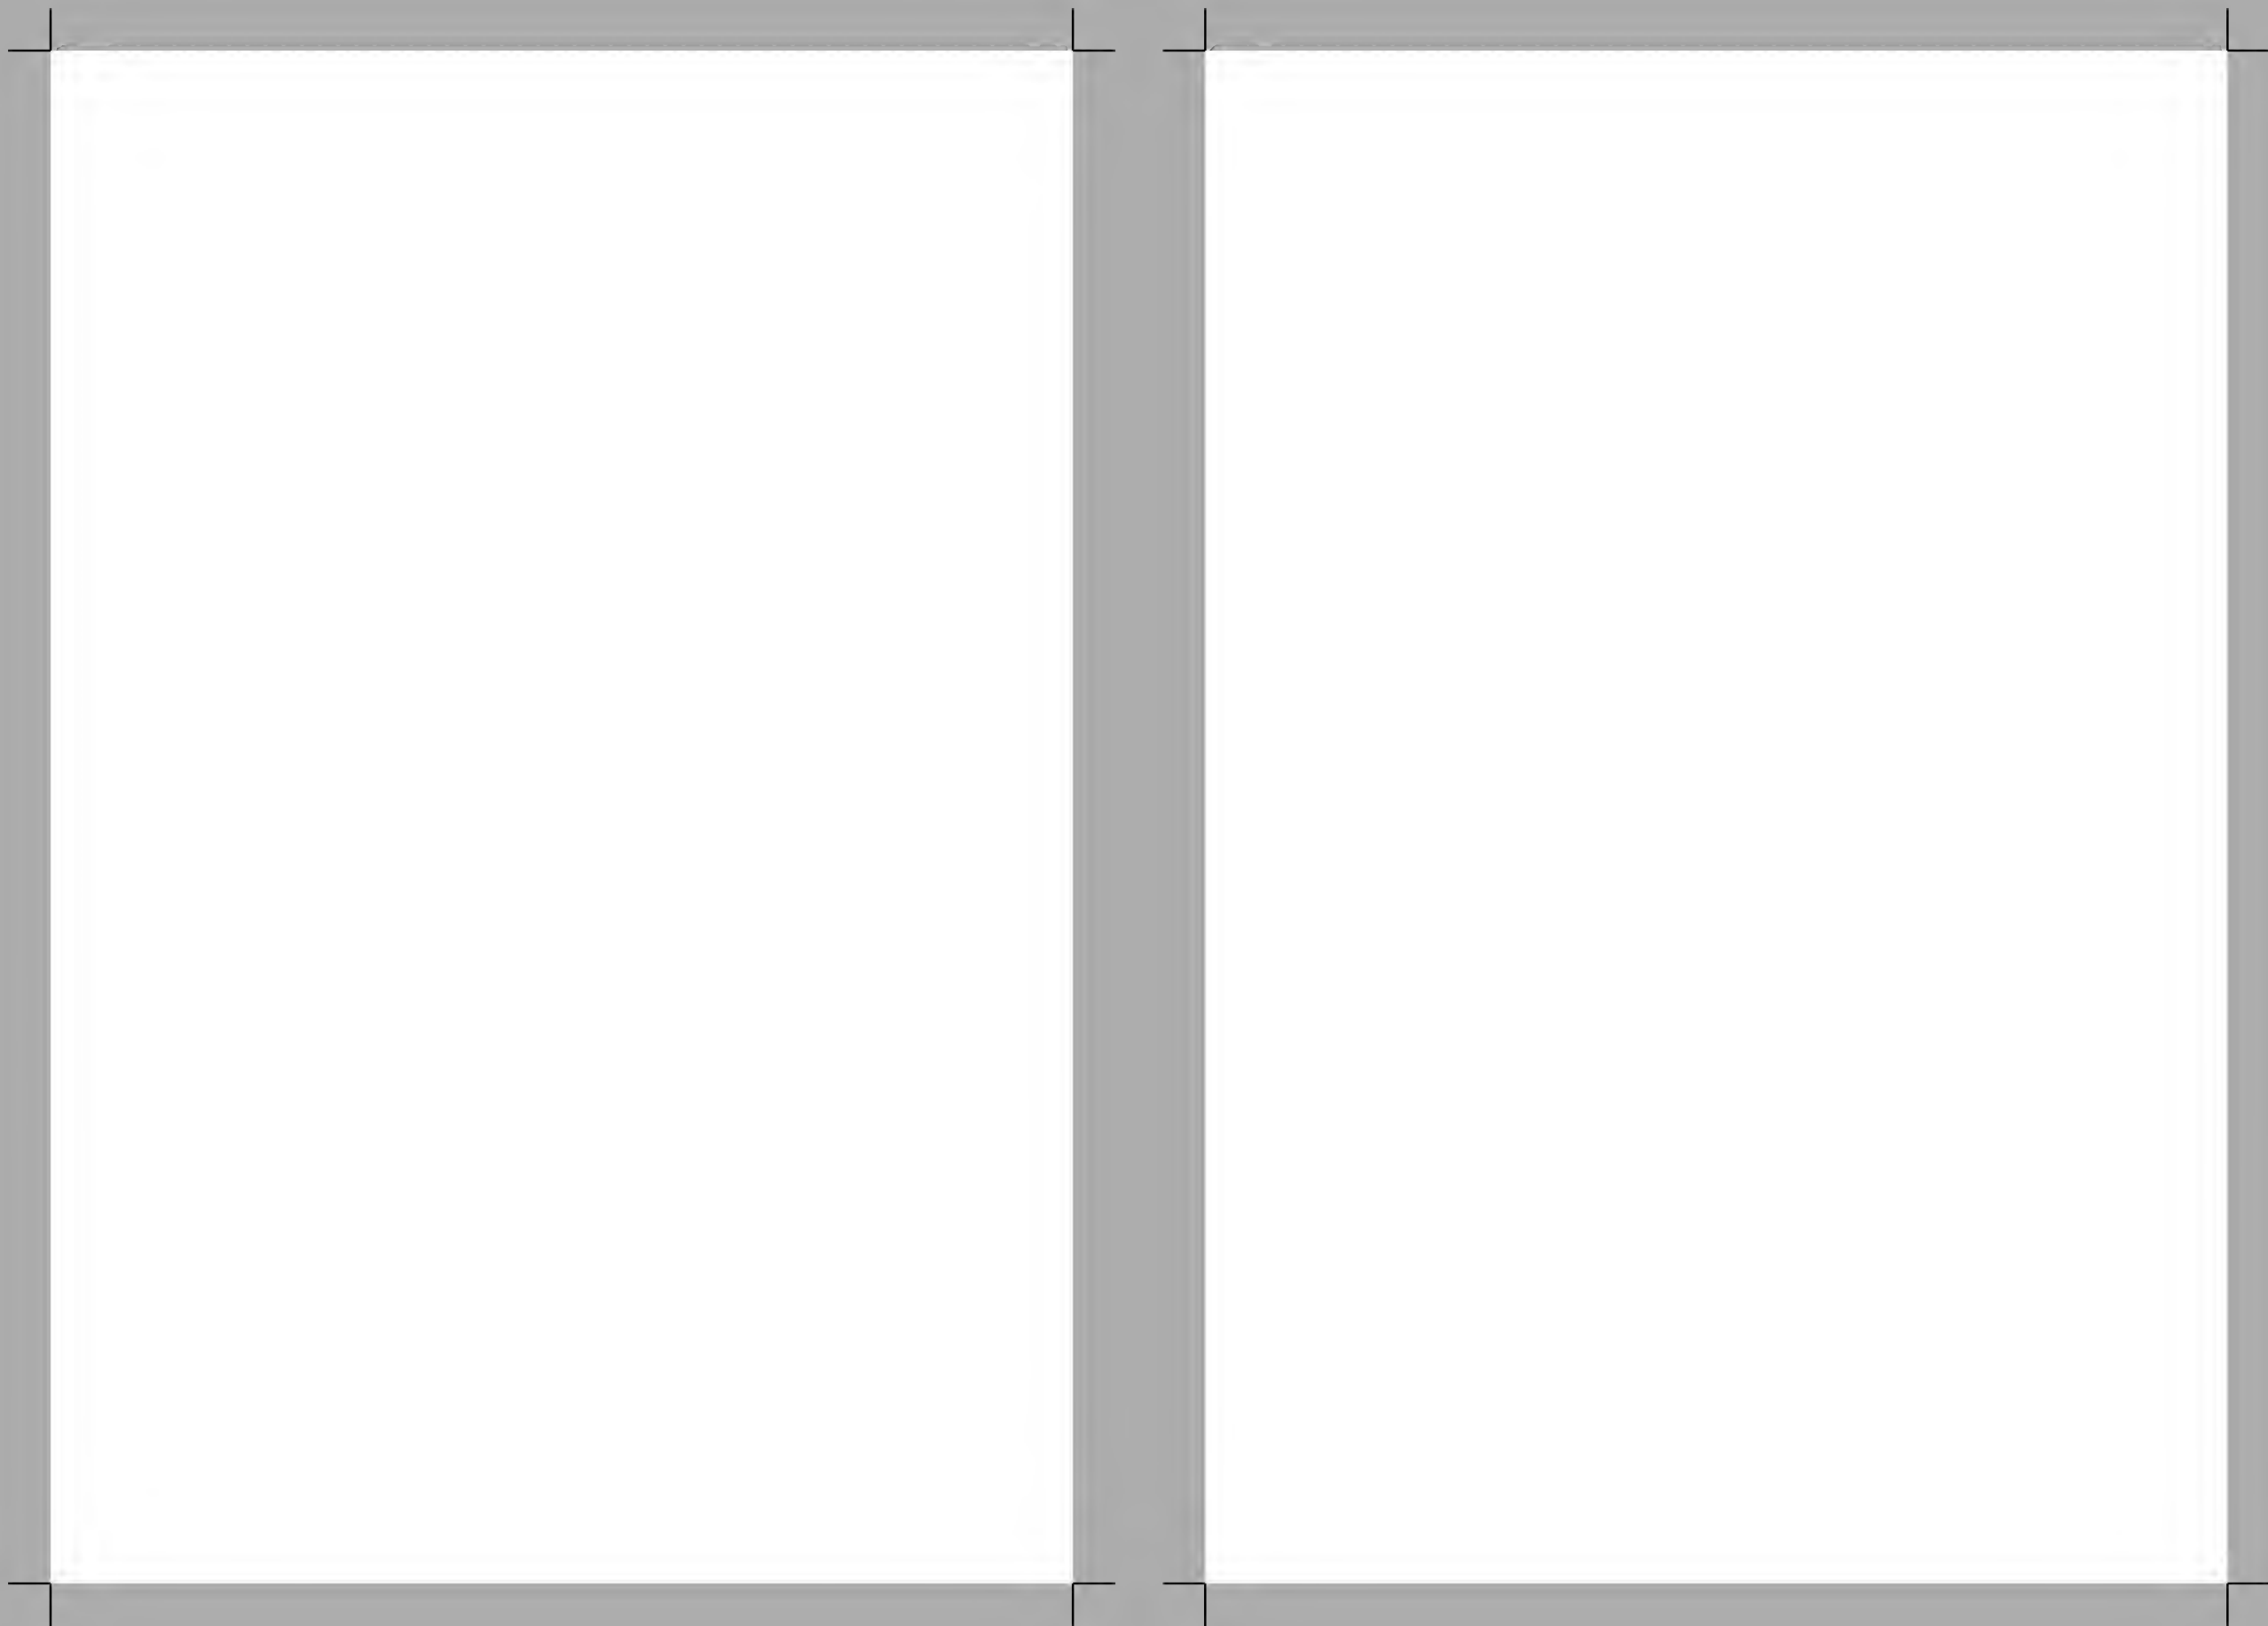

It hasn't been four weeks, months nor years
since last I saw the dream to be.
whilst sombre my heart burst without lust, nor affection;
this affliction, this angular pain,
my heart it bursts yet not another does it yearn,
until sweet angels cherubim sing on high.
for me to return to you;
but its all loves labours lost in amidst the hustle and bustle ,
a car screeches!
a car screeches!
then forward, and on, my good chariot, to summers dream.
No more a dream;
alas!

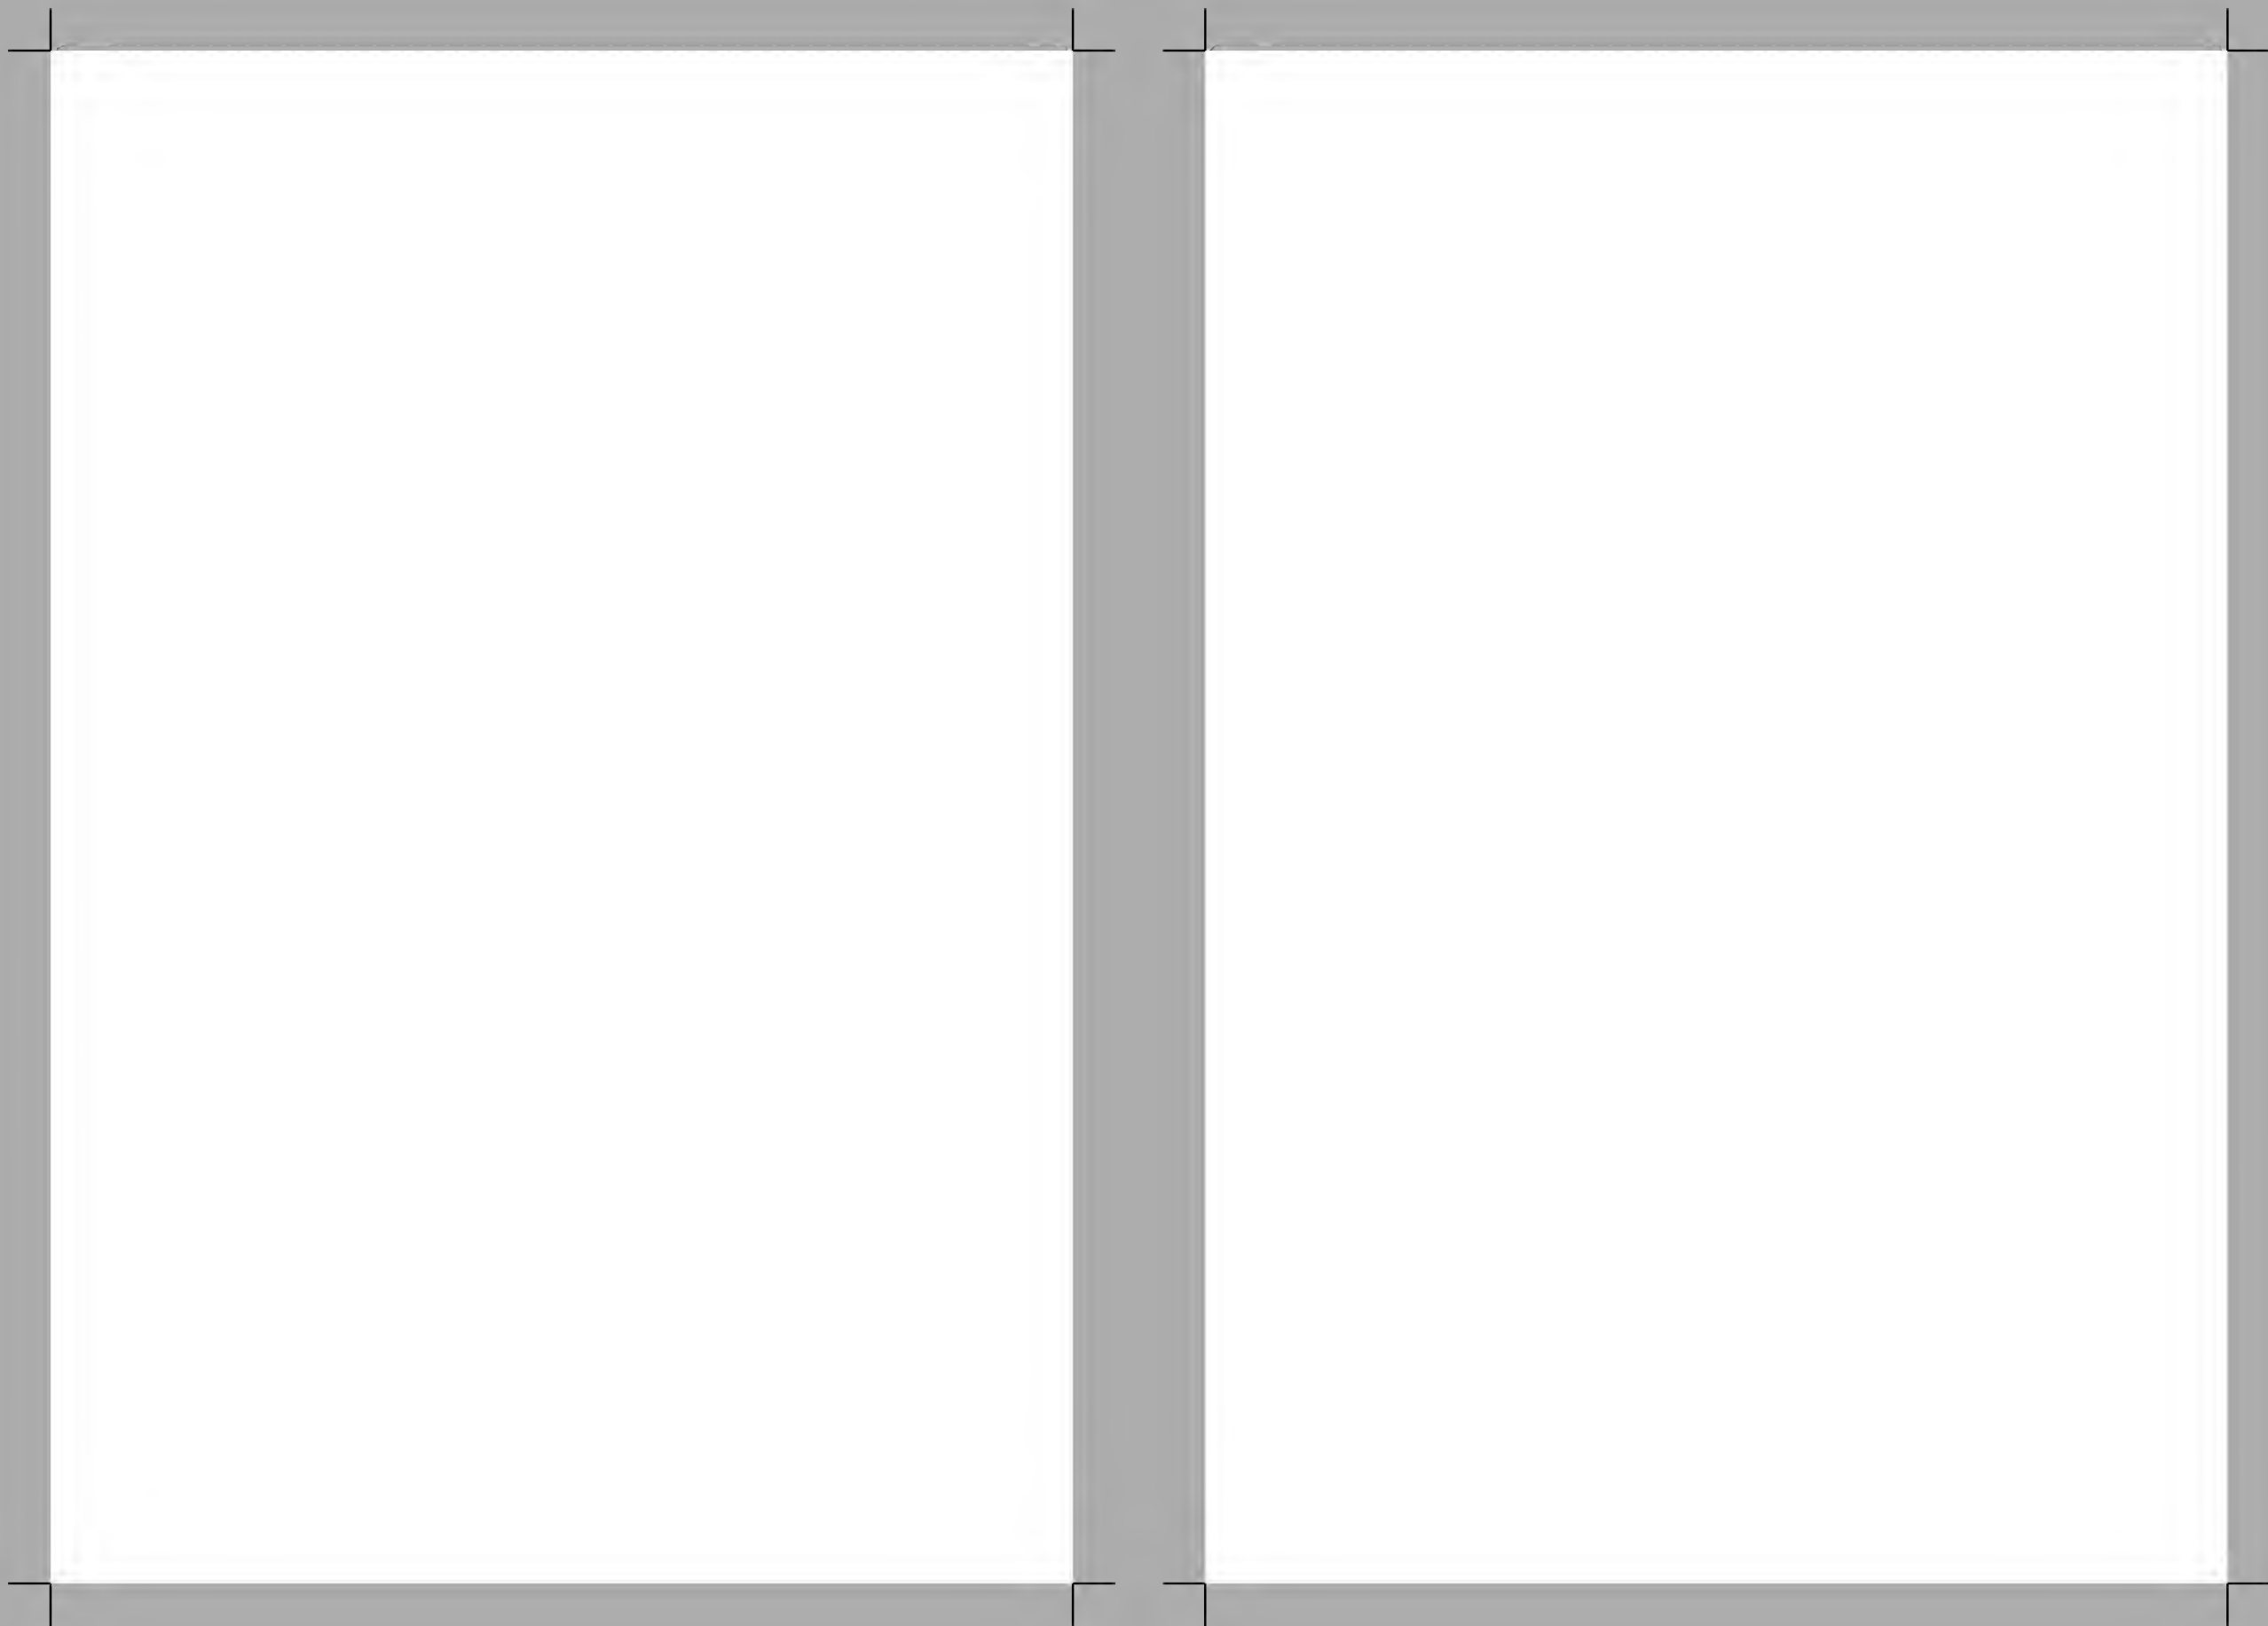

Amid the djembe (ante)

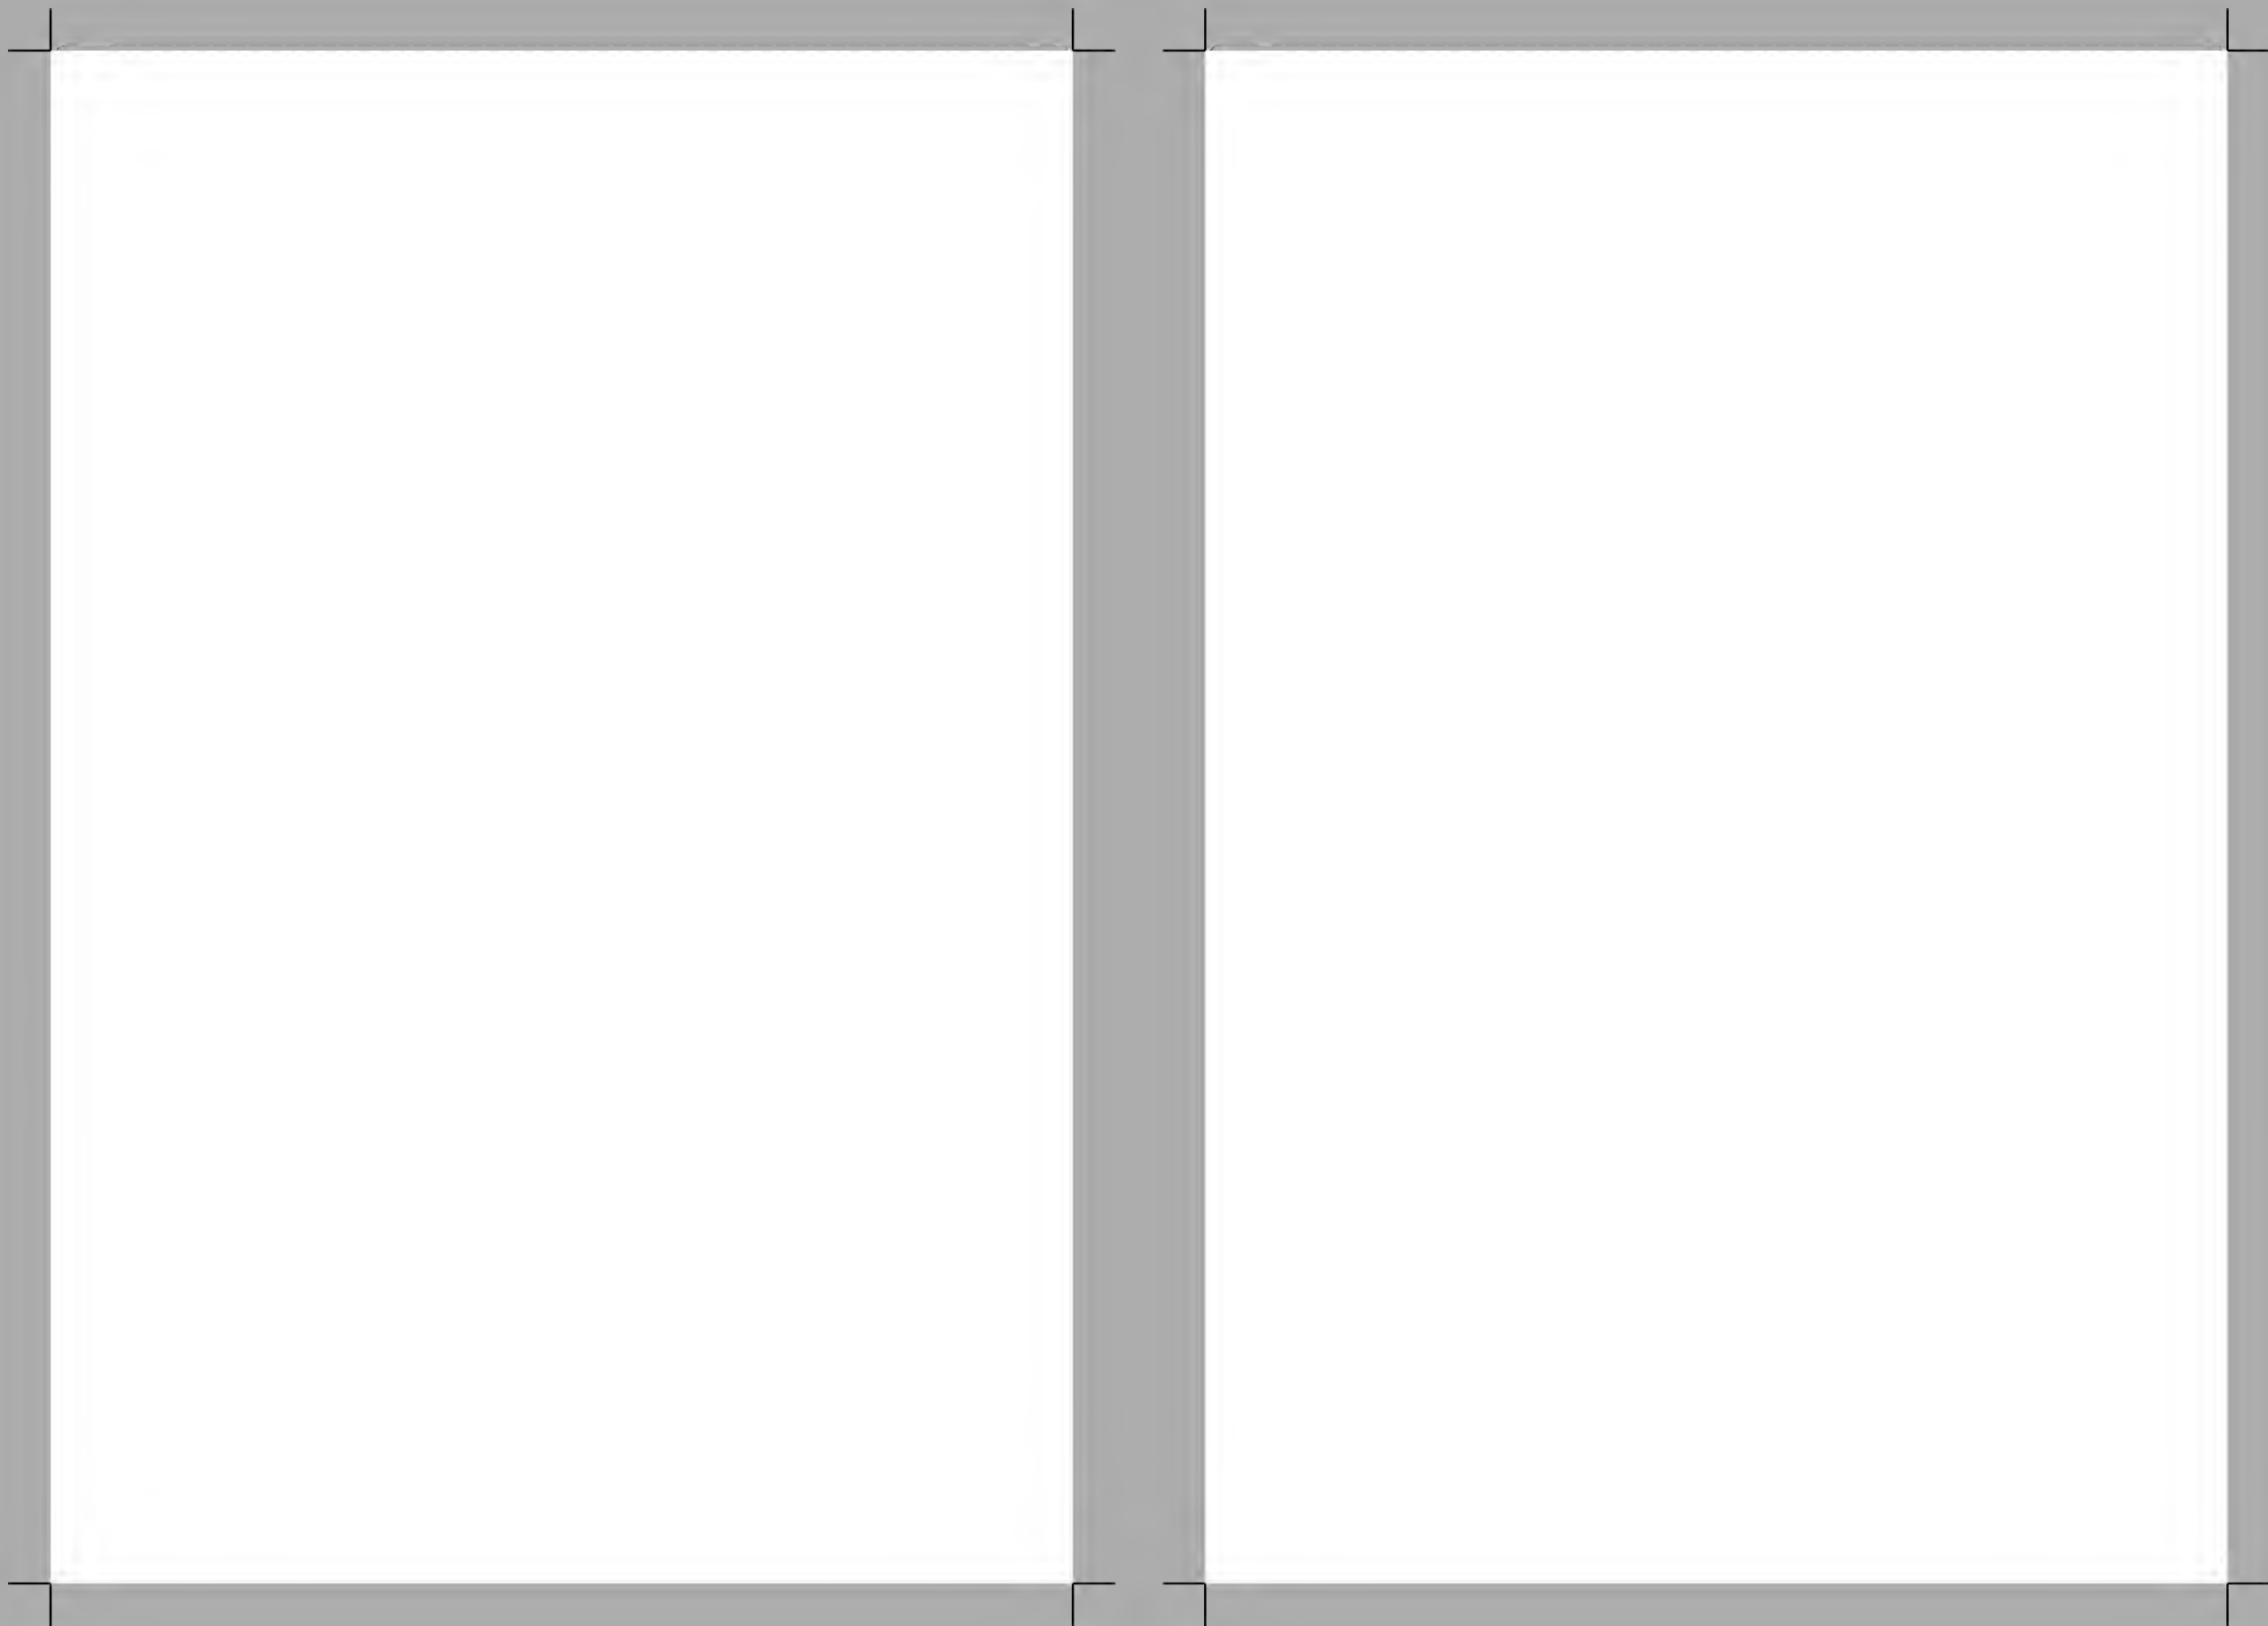

the throng of it; thrusting and thriving in amidst a cacophony
a roars stream, a fjord or ford;
as an eagle rises and soars like a beacon,
a shining light that is the synthesis between reality and the unspoken
Look at their metal shields and armour,
their spears all in black, red and golden blue.
We are the destroyers, we destroy
and so they did
until all things were extinguished of life.
It was they who are stealing the light

Evening fog and Glaciers

Their cold, standing, sitting and immovable
Like statues in a menagerie of ice
I cried for months, everyone was gone
and yet still i breathe mortality
the grey of a beard hides the youth once evident
in a mirror, or a lake;
puddles ripple with the fallen rain droplets
My hands, they shake as I stand before them
waiting, watching studying their faces
as though this is the last I will see
of frozen flame, fire lighting the last of them
until there is another torchbearer
awaiting a sacrifice none can comprehend.
I can feel it draining my heart of hate,
leaving love, incomparable love
evening and foggy glaciers.
